Security News

Security awareness for smart phones...

- **They are small but highly effective business tools—smart phones have**

allowed companies extract more productivity from their active workforce. However, these small computing devices carry a wealth of knowledge on them. Many of these devices carry intellectual property, client lists, and corporate address books. All of this information could be destructive in the wrong hands. This week's article discusses some emerging threats to safe computing on these devices. Take a look at it and ask yourself, "Am I managing these risks the best I can?"
